# Domum Remote Access

# Domum Remote Access

## Maximum Security for Remote Access

**What is it?** Domum Remote Access is a security solution designed to address the challenges of remote work, offering secure access based on the Zero Trust concept. It allows employees and third parties to securely access devices within the corporate infrastructure.

**How does it work?** The solution provides secure access to corporate infrastructure devices without the need for a VPN, agent installation, licensing, or additional configurations. Access is granted instantly and securely, without exposing device passwords and without requiring users to have credentials to access the PAM security platform. This ensures that the security team can protect all accesses, simplifying management and enhancing the security of the corporate environment

Administrator  
requests  
access for  
collaborator  
or third party

Manager  
Approves

User receives  
an email with  
a unique link

User  
accesses only  
authorizes  
devices

Link expires  
and no other  
access is  
possible

## Features

### One-Click Access

access devices without additional credentials;

### Advanced Options

control access by geolocation, time of day, day of the week, and duration;

### Centralized View

single interface to monitor actions in the environment;

### Complete Auditing

session recording and LiveStream;

### Granular Access

workflows with granularity based on recognized access groups;

### Simple Architecture

no need for agents, software, or additional licensing;

### Intuitive Dashboards

centralized management through easy-to-use dashboards.

## Benefits

#### ✓ Instant Access

fast, easy, and secure access for employees and third parties;

#### ✓ No VPN Needed

eliminates the need for a VPN and additional configurations for remote users;

#### ✓ Granularity

provides detailed access segregation based on senhasegura functionalities;

#### ✓ Operational Efficiency

improves the management of remote users;

#### ✓ PAM Features

real-time monitoring, session recording, and threat and user behavior analysis.
